

Our Installed Aboveground pool packages include;

Aluminum Wall Pool

Simply the best in aboveground pool technology! Aluminum is stronger at its molecular level and more durable than steel. It is less prone to rust and is extremely low in maintenance. Though sometimes costing more than other types, aluminum pools last longer. Spaulding Pool & Spa has been installing aluminum pools almost 5 decades. Extruded aluminum walls and frames are unbelievably strong. Strong enough to withstand our heavy snows.

Steel Wall Pool

These pools are made of multi coated steel materials and are for the budget conscious consumer. Though there are many different steel wall pool lines on the market today. Spaulding Pool & Spa will only carry steel wall pools that will be durable and long lasting. We are a quality minded business, selling quality products for a fair price.

Excavation & Preparation of Pool Site

We prepare the site of the pool for normal yard conditions, which includes slopes up to 8" of grade. We do not build the site up with fill but will dig down to create a solid base for construction. All materials for installation are included.

Foam Pool Covers

We use foam covers along the base of the wall as a support for the bottom seam of the liner. Many installers create a cove out of sand. Unlike sand or dirt, **Foam Covers** can not be washed out and will not hold moisture against metal components.

This feature reduces corrosion and may add years of life to a pool and its components.

Quality Virgin Vinyl Beaded Liner- *Beaded Liners* are thicker, more durable and longer-lasting than overlap liners and are beautiful in styling.

A-Frame Ladder - This durable ladder can be converted to a deck to pool ladder if so desired.

Wall Skimmer

Filter & Pump -A quality sand filter and pump sized to your pool is included.

Pool Maintenance Kit- Pool brush, vacuum, vacuum hose, telescopic pole, thermometer, test strips and hand skimmer.

Pool Care Start up Package- The chemical maintenance of your pool should be effective, convenient and value priced in the future purchase of supplies. **Spaulding Pool & Spa** offers various programs to meet these needs for our customers. Employees are trained to meet the changing needs of pool care chemistry so they can answer your questions and help you to troubleshoot various issues that may arise. **EZ Pool Care comes standard with our pools or your choice or one of the following programs:**

EZ Pool is a singular low-chlorine product that replaces 7 products for your pool. It makes the water soft and crystal clear with no taste or smell!

The **BioGuard Once-A-Week System** includes SilkGuard Complete Sticks, Smart Shock, and Back-Up Algicide.

Additional Chemicals— After your pool has been filled, bring in 8-10 oz. sample of water to one of our stores for a free computerized water analysis.

Any additional balancing chemicals needed at that time receive a 30% discount.
